RIMA-I Verification Achieved

Effective February 2, 2010, RoyOMartin's Eclipse™ Radiant Barrier OSB and Eclipse™ Energy Guard have achieved third-party verification by the Reflective Insulation Manufacturers Association International (RIMA-I). RoyOMartin currently has the only structural panel with this verification, certifying that we have met or exceeded all the criteria of a radiant barrier and a reflective insulation, as defined by the American Society for Testing and Materials (ASTM) and the United States Department of Energy.

To obtain RIMA-I verification, Eclipse™ and Eclipse™ Energy Guard had to go through several rigorous testing procedures performed by qualified scientists in the radiant barrier and reflective fields. Achieving this verification is yet another milestone in our efforts to drive our consumers' confidence in RoyOMartin products. Vice President of OSB Terry Secret emphasized, "Our team is committed to leading the industry with products and services that improve energy efficiency, such as our RIMA-I verified Eclipse™ and Energy Guard."

The only trade association representing the reflective insulation, radiant barrier, and interior radiation control coating industry, RIMA-I seeks to further the use of reflective technologies and work toward establishing ASTM standards for their testing and installation. In RIMA-I's verification letter, they praised RoyOMartin for its "unique distinction as a leader in the industry."

Customers will soon find the below RIMA-I verification logos on our Eclipse™ products, marketing materials, and website. To view the official verification letters for Eclipse™ Radiant Barrier OSB and Eclipse™ Energy Guard, visit our website at www.royomartin.com. Additional information may be found in the "Verified Products" section of RIMA-I's website, www.rimainternational.org.

All panel products are available FSC certified.
