

Hi-Tech Edger

This information is provided in good faith to describe assets available for sale "as is, where is, without warranty". The information is believed to be accurate, however, verification of the details and determination of suitability for use are the responsibility of the buyer. Availability is subject to prior sale.

Description: Hi-Tech 2-saw top arbor machine with independent arbors . Installed in 2001 and operated until 2006. The machine runs at 600 lineal per minute. The arbor motors are 150ho Toshiba motors. It is capable of 26 pieces per minute with a 12 ft average length. It can handle 3" to 6" thick cants. The infeed has linear positioners and the machine has a through feed chain which carries the infeed through the saws and serves as the outfeed for the machine.
