

Metal Detector RENS

This information is provided in good faith to describe assets available for sale “as is, where is, without warranty”. The information is believed to be accurate, however, verification of the details and determination of suitability for use are the responsibility of the buyer. Availability is subject to prior sale.

Description: The Rens LS345 Metal Detector was purchased and installed July 2001. It is equipped with a 12’ fiberglass conveyor section. It features a self balancing control instrument with a shielded Radax A40 Surround Search Coil having an inside opening of 46” X 46”. The Radax Coil is designed for detecting nails in all orientations.
